

WELCOME TO HALFMOON LAKE

We hope you enjoyed your day of boating on our lake.

At this time, the lake has been identified with minimal amounts of the evasive weed, Genus Myriophyllum, commonly known as Milfoil.

Please help us maintain our pristine water by checking your boat and trailer before entering our lake for any pieces of weed you may have picked up from another body of water.

Members of our association spend many hours per season looking for signs of infestation. Milfoil control has been accomplished by professional, state-approved hand removal methods to date.

Additionally, please be certain to inspect your boat and trailer upon leaving Halfmoon Lake so as to protect other bodies of water which you may subsequently visit.

Thank you for your help and come back again.

The Halfmoon Lake Association
